p10 review changelog (lessons 01-20, 10-production-engineering), 2026-10-22

Sandbox scratch: /Users/todorbra/Projects/ReactLearning/tools/sandbox/scratch/p10/ (err/unc/hyd/js/dp/r19/inert/strict/q/zod tests, vite build, eslint, tsc, web-vitals). All 146 ts/tsx fenced blocks were extracted and typechecked (tsc strict, target esnext); only context-dependent errors (missing imports/fragments) remained, plus the real fixes below.

01 Repository organization

- ESLint `no-restricted-imports` pattern with `!` negation: RUN (eslint 10.13). Confirmed works; found it also blocks a feature importing its own internals via the alias. Corrected (note added).
- `exports` vs moduleResolution: RUN (tsc 5.9 and 7.0.2). Confirmed; added that TS 7 removes `moduleResolution: node10` (TS5108).
- Corepack: corrected (not distributed with Node >= 25 per Corepack README). Turborepo URL: corrected to turborepo.dev/docs.

02 Deployment workflows

- Vite `build.sourcemap: "hidden"`, `define`: RUN (vite 8.3). Confirmed; noted Vite 8 `rollupOptions` -> `rolldownOptions` rename. `vite:preloadError`: confirmed in Vite docs.
- Cache-Control `immutable`: corrected to MDN BCD (Firefox 49, Safari 11, Chrome no). nginx ETag default: confirmed. Action versions: updated (checkout/setup-node now v7).
- Vendor traffic-splitting hedges left (unresolved by nature).

03 Environment configuration

- Vite env statics, prefix: RUN. Corrected: dynamic `import.meta.env[x]` inlines ALL `VITE_` vars (not SECRET). Docs checked (Vite 8).
- Zod config schema: RUN against zod 4.6; works; noted `z.url()` preferred in v4. IETF browser-apps draft: still draft rev 27.
- nginx entrypoint script / publishable-key hedges kept (unresolved, vendor-specific).

04 Observability

- web-vitals snippet: typechecked against web-vitals 6.2.3, OK; thresholds confirmed from README (INP 200/500, LCP 2500/4000, CLS 0.1/0.25). `long-animation-frame`: Chromium-only (BCD). sendBeacon 64 KiB: MDN confirmed. OTel browser maturity: unresolved (hedged).

05 Error monitoring

- Root callbacks: RUN in jsdom with react-dom 19.3.1. Confirmed names; corrected/added info shapes (caught: componentStack+errorBoundary; uncaught/recoverable: componentStack), order (onCaughtError before componentDidCatch), root unmounts on uncaught, effect throw is caught by boundary, event-handler errors only hit window error and tree stays mounted, hydration mismatch -> onRecoverableError, default uncaught -> window error.
- Vite hidden sourcemaps: RUN, confirmed; added caveat that .map still sits in dist.

06 Security

- React 19 `javascript:` URLs: RUN (SSR+client). Corrected: React 19 blocks (replaces with throwing stub) for href/src/action/formAction/object data, incl. obfuscated forms; `data:` and `//host` not blocked. Changelog 19.0.0 confirms.
- SameSite default Lax (MDN) with Chrome-specific Lax+POST exception; hedged other engines. report-uri deprecated / report-to + Reporting-Endpoints (MDN; Firefox 149). strict-dynamic semantics confirmed (MDN). Trusted Types: corrected to Baseline newly available Feb 2026 (Chrome 83/Firefox 148/Safari 26). Sec-Fetch-Site support. React server `nonce` option incl. {script, style}: confirmed react.dev.
- BUG FIXED: serializeForScript regex contained literal U+2028/U+2029 characters (syntax error in JS); replaced with / escapes.
- safeUrl tests: RUN in Node; all cases as the lesson claims. ESLint rule names confirmed. OAuth draft: still draft; RFC 9700 mentioned.
- Unresolved: OWASP ASVS numbering (hedged), DOMPurify option names (known real, not run), payment PCI scope.

07 Dependency security

- pnpm: updated to docs (v10+ scripts blocked, `allowBuilds`/older `onlyBuiltDependencies`, `minimumReleaseAge` minutes default 1440, `trustPolicy`, `blockExoticSubdeps`). npm: `min-release-age` exists (npm/cli source), trusted publishing OIDC + auto provenance + `id-token: write` (npm docs), `npm audit signatures`. Renovate/Dependabot cooldown keys. Action versions updated. `npm approve-scripts` noted untested. Unresolved: Dependabot `cooldown` key details not fetched (hedged).

08 Accessibility

- WCAG 2.2: corrected. Full list of 9 new SC with levels verified from w3.org/TR/WCAG22 (2.4.13 Focus Appearance is AAA, lesson implied required at AA; 4.1.1 removed). WCAG 2.2 still current (WCAG 3 draft only).
- StrictMode isFirstRender behaviour: RUN, confirmed (skip then focus). `inert` boolean prop React 19: RUN, confirmed. jest-dom `toHaveAccessibleDescription`: RUN, confirmed. Added: jsdom lacks `showModal`. vitest-axe matcher setup added.

09 i18n

- Intl outputs ("1.234,50 EUR", ru few, de full date, KWD 3 digits, decimal-string formatting, ar 'two'): RUN, confirmed. I18nProvider/format code typechecked. Temporal: corrected (BCD: Firefox 139, Chrome 144, Safari preview; absent in Node 24). MessageFormat 2: hedged.

10 Resilience

- withRetry: RUN (note shared RetryBudget limits retries across tests). AbortSignal.timeout/any, Web Locks, support versions from MDN BCD. Idempotency-Key draft: expired on datatracker, corrected. fetch priority support: unresolved (BCD lookup failed).

11 Design system governance

- React 19 `ref` as prop: RUN, confirmed; ⚠ removed. `@typescript-eslint/no-deprecated` exists (docs). Other tool hedges left.

12 Backward compatibility

- RUN: React 19 `<Ctx value>`, ref prop, `use`, `useActionState`, `useOptimistic`, `useFormStatus` exist; ReactDOM.render/hydrate/findDOMNode/unmountComponentAtNode removed; propTypes ignored. Corrected nuance: function-component `defaultProps` ignored with jsx runtime but still applied via `React.createElement`. forwardRef: react.dev says "will be deprecated in a future release".

13 Migrations

- CRA deprecation (Feb 2025 post) confirmed; React 19 codemod commands confirmed from upgrade guide. `<Ctx value>` confirmed. ts-morph/allowJs flags: unresolved (hedged).

14 Multi-team

- `fs.globSync` exists in Node 24 (RUN). merge-queue features: unresolved (platform-specific).

15 Technical debt, 16 ADR, 17 Documentation

- 15: no risky claims found. 16: tool-status hedge softened (log4brains etc. not re-verified, unresolved).
- 17: TanStack Query v5 `isLoading = isFetching && isPending`: RUN (disabled query -> isLoading false, isPending true). Storybook import path updated (SB 10.6 docs use framework package). TypeDoc/API Extractor claims unresolved.

18 Continuous delivery

- DORA: corrected. dora.dev now describes FIVE metrics (change lead time, deployment frequency, failed deployment recovery time; change fail rate, deployment rework rate); lesson said four with

"time to restore". Action versions updated; React 19 context syntax confirmed. Unresolved: OpenFeature status, CDN/merge queue/SW details (hedged).

19 Incident debugging

- Root callbacks and double reporting (onCaughtError + componentDidCatch): RUN, confirmed. `toSorted` versions (Chrome 110/Firefox 115/Safari 16) from BCD; TS2550 message RUN on TS 5.9. Vite 8 default target baseline-widely-available = Chrome/Edge 111, Firefox 114, Safari 16.4 (Vite docs): added note that the scenario (Safari 15) is outside default target. Fixed `@ts-expect-error` that was unused (tsc error) in the Playwright snippet.

20 Phase assessment

- B4 answers (event handler errors only reach window error; render errors) RUN, confirmed. CSP answer: report-to/report-uri note updated. i18n library hedge softened.

Unresolved summary

fetch priority browser matrix; DOMPurify config (not run); ASVS numbering; Dependabot cooldown exact keys; vendor/platform behaviours (CDN, merge queue, OpenFeature, OTel browser SDK); log4brains/adr-tools maintenance; nginx entrypoint conventions; TypeDoc/API Extractor details.
