Batch p9 changelog (lessons 09/01-16)

Lessons 01-02: p9-a.md; 03-04: p9-b.md; 05-07: p9-c.md; 08: p9-d.md; 09-10: p9-e.md; 11-14: p9-f.md; 15 and 16 below.

Lesson 15 (API changes across versions)

Sources: react.dev React 19 post, 19 Upgrade Guide, 19.2 and 19.3 posts, security posts, /versions, CHANGELOG.md. Executed: batching + StrictMode log in jsdom (1 batched render; double render in StrictMode), tsc with @types/react 19.3 (useRef() arity, ref-callback implicit return, global JSX removed) - all confirmed. Corrected/added: 19.1 (useId «r», unstable_prerender, comment containers), 19.2 details (PPR resume APIs, Web Streams in Node, SSR batching, useId `_r_`), new 19.3 entry (stable ViewTransition, Fragment Refs, browser(), Trusted Types, independent transitions), exact CVE/fixed-version list (55182 -> 19.0.1/19.1.2/19.2.1; follow-ups -> 19.x.4+), compiler compat, codemod commands, react-test-renderer deprecation, errors-not-rethrown, no separate 19.1 post. All verify markers removed. Unresolved: legacy.reactjs.org links not re-fetched; 16.x/17 historical items rely on well-known release notes (not re-fetched).

Lesson 16 (assessment)

B4 corrected by execution: queued useActionState actions show no intermediate UI (0 until ~1500 ms, then 3). B5 confirmed by execution. Answer-key claims aligned with lessons 02/04/08 findings (attribute mismatch not via onRecoverableError, Date/BigInt/null-proto, compiler mutation undetected, permalink semantics, startTransition-after-await citation). Unresolved: React Router loader type name left generic.
